DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed September 24, 2002 in which Claims 1 and 7 have been amended, has been place of record in the file as Paper No. 12.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Urani (U.S. Patent 4,391,485) in view of Bixter et al. (U.S. Patent No. 5,118,306). With regard to Claims 1 and 7, Urani discloses a fuse connection box (10) comprising a fuse (16) and a housing (12), the housing (12) being divided into a first side housing (14) in which a first side terminal (38) of an end of a first side wire (18) is assembled, and a second side housing (14) in which a second side terminal (38) of an end of a second side wire (18) is assembled, the first side housing (14) and second side housing (14) having portions (22,24,26,32,34,36) for engagement with each other, and the first side housing (14) and second side housing (14) being engaged to form a single housing

Art Unit: 2833

(12) in which the fuse (16) can be attached. The method limitations are deemed inherent. See Figs. 1-4.

However, Urani doesn't show the first and second housings being separately preassembled with the first and second wires, such that the first side wire is substantially enclosed within first side housing and such that the second side wire is substantially enclosed within second side housing.

Bixter et al. discloses the concept of having first and second members (22a-b) being separately pre-assembled with first and second wires (40), such that the first side wire (40) is substantially enclosed within first side member (22a) and such that the second side wire (40) is substantially enclosed within second side member (22b). See Figs. 1-7.

Therfore, it would have been obvious to one with ordinary skill in the art to modify the housings of Urani by separately pre-assembled them with first and second wires as taught in Bixter et al. in order to simplify the assembling process and make it more efficient.

With regard to Claim 2, Urani discloses the first side housing (14) and the second side housing (14) are of identical shapes having first engagement portions (22,24,26) at one end in the direction of arrangement of fuses (16) and having second engagement portions (32,34,36) of shapes engaging with the first engagement portions (22,24,26) at the other end. See Figs. 1-4.

4. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Urani (U.S. Patent 4,391,485) in view of Bixter et al. (U.S. Patent No. 4,560,227) and Call

Art Unit: 2833

(U.S. Patent 4,758,184). With regard to Claim 3-6, the combination of Urani and Bixter et al. disclose the claimed invention except a protective cover having a protective frame.

Call discloses a fuse connection box (10) comprising a protective cover (20) having a protective frame (23) attached to a first side housing (42) and second side housing (40) so as to cover a fuse (52) in a state where the first side housing (42) and the second side housing (42) are connected and the fuse (52) attached. See Figs. 1-5.

Thus, it would have been obvious to one with ordinary skill in the art to modify the connection box of Urani and Bixter et al. by including a protective cover having a frame as taught in Call to make the box resistant to vibration and rough use.

Response to Arguments

5. Applicant's arguments with respect to claims 1-7 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edwin A. León whose telephone number is (703) 308-6253. The examiner can normally be reached on Monday - Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on (703) 308-2319. The fax phone

Art Unit: 2833

numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
